DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2/21/2007 has been entered.

Terminal Disclaimer

2. The terminal disclaimer filed 2/21/2007 does not comply with 37 CFR 1.321(b) and/or (c) because:

An attorney or agent, not of record, is not authorized to sign a terminal disclaimer in the capacity as an attorney or agent acting in a representative capacity as provided by 37 CFR 1.34 (a). See 37 CFR 1.321(b) and/or (c).

Oath/Declaration

3. The declaration of Palanisamy Arjunan filed 2/21/2007 under 37 CFR 1.132 has been reviewed and found to be sufficient to remove US 2004/0132935 as prior art against the instant application.

Double Patenting

4. Claims 1, 2, 4-15, 17, 20-29, 32, 33, 35, 37-39, 41-43 and 45-49 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 44-50, 53-56, 58, 60-64 and 70 of copending U.S. application No. 10/667,586. Although the conflicting claims are not identical, they are not patentably distinct from each other. The two claim sets describe substantially the same polymer obtained by methods which, although differing somewhat in the scope of required elements, are also substantially the same. It is particularly noted that the working examples from each specification are identical. Instant claims 1, 2, 4-11, 17, 20, 25-29, 32, 33, 37-39, 41-43, and 45-49 are obvious over copending claims 44-50, 53-56, 58, 60-64 and 70. The copending claims have not specified the crystallization temperature as required in claims 12-15, nor the melt flow rate as required in claims 21-24, nor the syndio/isotacticity as required in claim 35; however, in view of the similarity of the methods which are stated to achieve the polymer of each claim set, it would appear that these additional properties would be inherent in the polymer of the copending claims. The burden of proof is shifted to applicants to show that the additional claimed features would not be present in the polymer obtained according to the claimed copending method.

MPEP 1490 V.D. states that if both applications are filed on the same day, then an ODP rejection cannot be withdrawn without a Terminal Disclaimer in the application which claims the "improvement." In this case, the two specifications at issue contain a substantial amount of common material, including identical working examples, yet each

claim set is drafted to emphasize different process features, and therefore either of the two applications could be seen as containing the improvement. Accordingly, this rejection cannot be withdrawn even though it is the sole remaining issue.

5. Claims 18 and 19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
